

## **GUIDED ACCESS (LOCKING A STUDENT IN THE APP)**

### **PURPOSE:**

Guided Access can come in handy in a lot of situations. Think of it as a restricting, limiting feature for all apps on your iPhone/iPad but one where you can customize what's restricted based on visual cues.

For example, you want to let your kid use an app but want to prevent him/her from tapping on certain buttons/links/areas on the app

### **TO SET UP:**

- Open iPad Settings
- Go to General> Accessibility> Guided Access
- Toggle Guided Access on
- Select Passcode Settings> Enter memorable, consistent passcode. **WRITE IT DOWN**

### **TO START GUIDED ACCESS:**

Open desired app/site to lock child in

- To START: Triple click home button
- To END: triple click home button. Enter selected code. Select END or RESUME (to start again) in left corner.
